

## How to make an creature and habitat

### Owl

1. To make the eyes, cut out a piece of felt—shaped like the number eight—then glue two small wiggle eyes onto it. Stick this onto a pine cone.
2. Make the owl's ears by cutting a 3cm square of felt. Glue one of the points between the eyes and glue the opposite corner to the back of the owl's head.
3. Create a beak by cutting a small felt triangle and glue it in place.
4. Cut out two wings. Glue them, opposite each other, on the side of the owl.
5. Cut out two feet and glue them at the bottom of the pine cone.
6. Why not try to make a creature of your own?

### Habitat

1. Collect four straight sticks and stand them in a pyramid position. Tie at the top with string.
2. Use three more straight sticks and tie them in between the other sticks on three sides—leaving one side open as the entrance.
3. Weave small twigs, moss or string in between them to create a little tepee.
